pulley/clutch. Based on this information we recommend replacing the water pump, belt, tensioner, and the a/c compressor and other needed components.

1 - *Diagnostics

Tech: M Addington

Note: This job is approved at drop off. Diagnostic time may not be denied at time of estimate approval/denial.

Customer brought the truck in for us to diagnose a shredded serpentine belt along with a major coolant leak. Upon inspection we found that the water pump had failed grossly and killed the belt. We found that the tensioner is very worn/coated in rubber as well. We checked/spun all the other pulleys and found that the a/c compressor pulley is very difficult to turn due to what appears to be belt rubber stuck in between the pulley/clutch. Based on this information we recommend replacing the water pump, belt, tensioner, and the a/c compressor and other needed components.
