### 2 CEL

#### CAUSE:

Check DPF and see if cleanable first, look for any signs of over fueling.

P0275 - Cylinder 5, torque contribution low

p0305 - Cylinder 5, contribution too low or misfire

P1305 - Cylinder 5, intermittent misfire

P3797 - DPF soot level

P3798 - DPF soot level

P3880 - Hydrocarbon storage

P3896 - DPF filtration efficiency, too much soot detected

#### CORRECTION:

Brought truck in and read codes. Removed and inspected DPF first as requested by customer. DPF Filter media has shifted rearward into the EGT probes causing a breach, it is also soot loaded. Evidence of exhaust leaks from around the DOC heat shield noted. EGT probes damaged by the shifted DPF filter media. Referred to RMI for P0305 troubleshooting. RMI first refers you to E290 injector cleaning procedure. Checked stock, 1 injector available on hand. Not a warranty case. Unable to meet conditions to perform a Cylinder performance test. Unable to complete a compression test, batteries weak. Next step is to visually inspect rockers and jake assemblies. Engine covered in bird feces, moved to wash bay and cleaned under hood. Moved truck back

3 diagnose low compression cylinder 5 - approved for repair  
CAUSE:

## **CORRECTION:**

Removed intake assembly, removed valve cover. Discovered bent intake pushrod on cyl 5 and the valve bridge laying in the head. All valves are far out of adjustment loose. Inspected lifter from above with an inspection camera. Removed oil filters and inspected for contamination, none found. Drained and removed oil pan, inspected cam and lifters, no damage found.
