Work Order #97205

Machine Information	
Make	Caterpillar
Model	326
Serial Number/VIN	MFJ20254
Asset #	52-13618

Incident/Repair Description

The machine was being tracked into a shallow pond to set a pump basket. While doing this, the operator tracked it just above the bottom of the car body and the machine shut off. The machine was removed from the pond and brought back to our Elgin shop for inspection/repair. All systems were inspected and checked for water infiltration before the machine was started. All fluids and filters were changed. Attached is the Work Order report showing the detailed scope of work for the repair. Following the repairs, the machine was run extensively to verify proper function. Fluid samples were taken post repair to verify repairs. See attached Cat ET Product Status Report and fluid sample history.

Note: All of the grade control components were removed and are not included.
