Remove & install* operator station*

Removed all harnesses from cab. Recovered a/c system. Drained both hydraulic tanks. Disconnected steering and brakes. Removed pins and pulled cab. Cab has been reinstalled and all harnesses and hoses connected. Cab had to be tilted in order to repair a small coolant leak but pin was seized in bore. Cab mount assembly was removed; tilted cab; removed pin. Cab mount reinstalled and all pins have been resecured.

Troubleshoot* transmission*

Removed covers to check pressures. Fmi 1401-11 active. Removed battery cover and found power wire corroded with no terminal to battery post. Removed cables, cleaned cables. Replaced broken cable. Checked machine and 1401-11 was gone. New codes: e2201, e2202. Followed m0072884-06 in sis unable to drive machine around as it has no forward movement. Transmission intermediate speed sensors in et were reading non-zero. Ran main relief test, machine passed. Ran clutch pressure calibrations, machine passed. Followed steps for e2201 and e2202. Disabled dynamic start gear. Machine slipped doing each test respectively. Troubleshooting tree ended with transmission needs replaced and to submit a dsn with post-testing psr. Pressures (oil at 155): pump pressure - low idle(2f): 455 high idle(2f): 495; torque inlet - low idle:18 high idle: 94; torque outlet - low idle: 15 high idle: 56; main relief - high idle: 495
Clutch 1: 160
Clutch 2: 435
Clutch 3: 380
Clutch 4: 435
Clutch 5: 435
Clutch 6: 310
Luc: 260

Remove & install* transmission*

Removed all lines and connectors to transmission. Transmission has been removed and completely stripped. Component was washed off, sent to be rebuilt. All o-rings and seals have been ordered for transmission. Replaced any damaged hoses. Transmission has been reinstalled. Mounting bolts have been torqued to cat spec. Installed all lines going to transmission; both pumps; all lines. Refilled both hydraulic tanks and transmission with new oil. Coolant has been refilled with new fluid. Transmission fill test and clutch engagement calibration has been performed, passed. All calibrations were performed and the transmission then started acting up and failing tests. Transmission eventually lost all pump pressure and was no longer at all functional.

Inspect * engine & transfer gears*

All bearings on rear gear train needed replaced. Idler gear bearings cannot be replaced individually so entire gear has to be replaced. New seals for gear covers have been ordered, as well as needed bearings. Rear gear train has been reassembled, all bolts torqued to cat spec.

Remove & install* tc/trans oil cooler*

Removed transmission oil cooler. Cleaned with hot soapy water then blew out cooler with pressurized air and let sit out to dry. Installed oil cooler, connected all lines.
