AM**Remove & install\* transmission\***

Dsn #crm-2367103-r5f9 a louder 3rd gear than the other gears and when you down shift the rpm rise mid shift. Technician notes: during first test run, heard squealing noise coming from transmission when shifted into third gear. All lines visible marked with coordinating colored ZIP ties. Factory ZIP ties removed to free lines to move. Lines began to be removed, capped, and cc bagged, then set aside. Hydraulic lines continue to be marked, disconnected, capped, cc bagged, and set aside. Pictures taken to ensure proper installation. Drive shaft removed, and cap screws thrown away & new ones ordered. Brackets removed with cap screws placed in bags and attached to corollating bracket, then set aside. Holst connected to transmission. Transmission mounting bolts removed and set aside. Transmission lifted with engine, and stand placed under engine to support weight. Transmission to engine cap screws removed, thrown away, and new ones ordered as some were damaged. Transmission lifted out of machine and set on stand. Transmisison delivered to spec shop. New transmission recieved from spec shop and brought to bay. All fittings and brackets needed from old transmission transfered to new transmission. New o rings installed on all fittings. Two hose lines found to be damaged: new lines ordered and received. Lines installed. Hydraulic lines reinstalled according to color coordinated ZIP tie markings. Hard lines installed; cap screws torqued to spec. Electrical harness reinstalled according to schematic. All lines and harnesses tied down to prevent rubbing. Filled to spec and checked for leaks. Hydraulic tanks filled. Hydraulic tank cap found to have "50w" written on it, supervisor informed, 50w marking removed from cap and 10w put into tank as per cat manual. Machine checked for leaks. Coolant added to spec. Machine started, no leaks found. Calibration tests conducted according to instructions provided by supervisor. Calibrations completed. Fluids checked, all within spec. Machine greased, psr taken, and notes completed. Machine test driven, parked in staging area. Extra time needed: machine went into regen during calibrations.

**Perform prod update on\* transmission\***

Performed product update (ps54750), when tearing transimision down found additional damage to the clutch 6 housing, and all friction discs and plates due to chunks missing and heat marks. Built transmission with all update parts and new plats, discs, and clutch 6 hub. Preformed dyno on trans- ok.

**Weld\* transmission\***

Set-up and sprayweld transmission housing bearing areas per cat specs.

**Measure\* torque cvtr,dvdr,retard\***

Measured stator, turbine and impeller.

**Remove & install\* cab\***

Machine brought into shop and staged for repair. Hood lifted, power disconnected. A/c system recovered. Panel removed and set aside. Harness assemblies disconnected. While disconnecting harnesses, found that two wires had been damaged by clamp. Traced wires in schematic, no corrolation to current repair. Parts ordered for repair. Belly pan lowered to the ground, found cab PIN sitting on belly pan. Pins inspected and found it to be the rear left cab PIN. Coolant drained into pan and covered; set aside. Hydraulic oil and transmission oil drained into clean pans and both set aside. Hydraulic lines, steering llines, harnesses, and a/c lines all marked, capped and set aside. Panels removed and set aside. Lifting eyes

Replace drive train oil filter\*  
Customer complaint:transmission issues cause:transmission repair process  
comments

Traveled to mt Juliet tn. Customer stated machine would get stuck in 3rd gear at times and would not shift up or down. Inspected machine, all fluids ok and no visual issues present. Ran machine, machine shifted ok during testing. Removed transmission filter. Cut and inspected filter, no debris or issues found. Installed new filter. Checked all pressures per instruction (uebe2158-11). Found most pressures below specification. Submitted results to dsn. Released machine.
