Recall #: VB1 | 2014-2019 DS 3.0L DIESEL EGR COOLER Recall Date: 2019 Nov 01

Recall Description

The Exhaust Gas Recirculation (EGR) cooler on your truck [1] may be susceptible to thermal fatigue. Thermal fatigue may cause the cooler to crack internally over time. An EGR cooler with an internal crack will introduce pre-heated, vaporized coolant to the EGR system while the engine is running. In certain circumstances, this mixture interacts with other hydrocarbons and air in the system, potentially resulting in combustion within the intake manifold, which may lead to a vehicle fire.

Remedy

FCA US will conduct a voluntary safety recall on all affected vehicles to replace the EGR cooler with a new EGR cooler that is not susceptible to thermal fatigue. In the event the intake manifold is damaged, the intake manifold will be replaced.

Recall #: W58 | 2014-2018 WK & DS LOSS OF CRANKSHAFT POSITION Recall Date: 2020 Aug 20

Recall Description

The magnetic material attached to the tone wheel provides a signal to the crankshaft position sensor. If this signal material is lost, the engine

1C6RR7PM5F56387Z

loses its ability to synchronize injector pulses and cam timing. This loss of crankshaft position can result in an engine stall, as well as loss of the ability to restart the engine.

Remedy

Update the powertrain control module software to maintain vehicle propulsion by reading the camshaft position signal in the event that crankshaft position signal is lost.
