**TERMS** Net 15

**MAKE/MODEL**  
Komatsu/ PC138

DATE	ACTIVITY	QTY	AMOUNT
02/14/2023	<b>Field Labor standard rate \$165.00</b> Pull the engine valve adjustment paperwork and go out to the machine and start pulling all the covers over the engine to get at the valve cover. To get the valve cover off the A/C compressor and mount, the EGR tube from both ends had to be pulled, intake hose and intake inlet tube, crank case breather hoses and a wiring harness all had to be pulled to get the valve cover off along with many little brackets. Then pull the engine front cover and roll the engine over to the first line up mark and check the engine valve adjustment, it is good and all in spec per the valve cover. Then roll the engine over again to bring up the second adjustment area and check the engine valve adjustment and it is good too. Reinstall the lower engine cover first. Then clean the engine valve cover mounting surface and reinstall the valve cover. Start reinstalling all the brackets back on the valves and as much of the machine as I can until the intake and EGR gasket are needed. Finish putting muffler hood and covers around the muffler on and adjust the A/C compressor drive belt. Pickup tools and clean them and put away.	6	990.00
02/15/2023	<b>Field Labor standard rate \$165.00</b> Install the intake gasket first and intake hose, then other bracket on the intake top plate. Install the EGR tube and new gaskets on both ends of the EGR tube. Tighten the hose clamps on the EGR tube and intake tube. Then finish installing all the brackets on and over the engine and all the hose clamps to the brackets. Then reinstall and covers back over the engine and step plates. Once done start and warm up the engine, install the track stop pins and do the hydraulic testing and write down all the pressure. Go into the shop and look up the pressures and engine spec for the machine write them down and compare to the machine. Talk with Dave and Keith about it and we decided to turn the hydraulic pressure up because it is 300 psi low. Go back out to the machine and pull the side cover off the back side of the hydraulic valve bank cover and adjusted the main pressure up. Engine RPM is 2000+-50 and it was 2000	3.50	577.50

DATE

ACTIVITY

QTY AMOUNT

L.S. Or stand by pressure 290-580 psi and it was 478  
Swing is 4235 +261-29psi it was 4420 psi  
Travel, Boom, Arm, Bucket and Blade are all  
spec of 5050 psi +-150 it was 4900psi, adjusted up to 5190psi  
Once done put cover back on the back side of the hydraulic main valve bank  
and pick up tools and let Keith know what I had adjusted the machine  
hydraulics to.

Late fee of 10% will be applied 20 days after invoice  
date
