TRANS

Jonathan Helms Aug 5, 2024 8:22 AM

Troubleshoot* fault code*

Traveled to mt Juliet tn. Machine has codes for trans slip in 1-3 gears. Checked, recorded pressures on worksheets. Machine will need transmission work. Machine only moves in reverse, no forward gears

Troubleshoot* transmission*

Checked trans pressures. Performed main relief test, passed. Clutch pressures good except clutch 5. Pump pressure at high idle was low. Cut filter open, there was debris found. Updated trans ecm software to current software.

Remove & install* transmission*

Drained all fluids. Recoverd a/c system. Disconnected cab harness, removed hoses for steering. Removed cab. Removed pumps, hoses, and harness from transmission. Supported engine. Removed transmission. Swapped fittings and hoses from old transmission to new transmission and replaced o-rings. Installed transmission in reverse order of removal.

Perform prod update on* transmission*

Washed and disassembled transmission. Cleaned and inspected all components. Found all friction disks worn beyond cat spec. Rotating clutch hub and plates all have heat discoloration and smearing. Main transmission housing had grooves worn into reaction faces for clutch plates. Found torque converter severely worn, measure out of cat spec.

Remove, recond/install* eng output xfer gears*

Inspect pump drive gears and bearings. Removed gears, inspected bearings. Bearings had wear. Replaced all bearings. Idler gears bearings are not servicable, ordered new gears that came with bearings installed. Installed gears, torqued to spec.

Flush * tc/trans oil cooler*

Removed powertrain cooler. Flushed transmission cooler and dried with air gun. Reinstalled powertrain oil cooler.

Test/check & adjust* transmission*

Cleared all codes. Reseated main relief valve compensation. Performed the engage calibration, pressures were in spec. Performed and passed the fill calibration.

Remove & install* transmission lines/hoses*

Customer had a complaint about oil leaking around transmission filter housing. Cleaned housing, note supply hose and lube hose on filter housing leak. Raised cab. Removed hose from transmission to filter housing, replaced with new hose & orings. Removed failed gear train lube hose, installed new hose & orings. Lowered cab to operate and confirm leaks corrected.

Notes

Notes

Troubleshoot* transmission*

Cause: open in the connection between the transmission harness and the chassis harness. Correction: pulled psrpt. Code for open on the transmission main relief solenoid circuit. Checked for continuity from the connection at this cab through the solenoid and it measured open. Lowered belly pans for access. Drained transmission fluid. Removed transmission oil pan for access. Unplugged the solenoid and installed a jumper wire. Code remained the same indicating an open in the harness. Checked the solenoid and it checked good. Checked wires from the solenoid plug to the cab plug and there is an open on the supply wire. Wiggle tested harness and found that the open was in the connection of the transmission harness to the chassis harness. Could not access the connector to inspect it. Drained coolant and removed bottom coolant tube for access to transmission plug. Found that the connection was not screwed down tight. Disconnected harness and inspected the pins and sockets and they look good. Connected harness and tightened the connector. Tested machine. Codes cleared. Verified connection is now tight. Installed coolant line. Filled coolant and transmission oil. Installed belly pan. Topped off transmission. Pulled final psrpt. Returned machine to normal operation.

Notes**Notes**

Regenerate* aftertreatment system*

Complaint: emissions code/derate cause: regen inhibit switch pressed several times leading to a system lockout

Correction: cleared codes. Ran a manual regen and it passed. Soot load now at 0%. No further issues at this time. Returned machine to normal operation

Notes

Notes

Troubleshoot* transmission*

Customer complaint that trans does not want to shift out of 1st and when it does a code is thrown. Could not recreate issue upon arrival. Trans shifts normally. Updated all ecms. No active or logged codes relating to the trans, active code for action alarm. Transmission fault light active on instrument cluster. Passed clutch fill. No information available about light. Reached out to tc with no answer. Found action alarm harness damaged.

Repair* transmission*

Repaired action alarm harness with new pins and cutting damaged part away. Key cycled machine and no transmission fault light was on. No active codes. Operated machine and machine performed correctly. Secured action alarm in cab. Pulled psr and returned machine to service.
