Quantity	Product Id	Description	Unit Price	Total Price
01/27/2026		Arrived at customer location. Located unit. Verified complaint of customer that unit will not move forward or reverse. Verified that rd120 is seeing forward/reverse and that it logs a fault when solenoid is disconnected. Found that modulation valve has failed and needs replaced.		
02/10/2026		Already at customer location. Prepped for job. Removed modulating valve, lower portion of the assembly below the valve has to be removed as well for replacement. Could not pull out with magnet. Could not remove with bolt threaded into it. Contacted Joe with Clark. I was explained if I was not able to remove that piece and replace transmission would have to come out to remove. Traveled to local vendor and made tool to extract part. Come back next day to finish. Spoke with Austin and updated.		
02/11/2026		Traveled to customer location. Checked in with Austin and located unit. Prepped for job. Installed tool to removed part. Got part removed and installed new parts. Tested unit and still no travel was present. Requested schematics for port testing. Installed gauge and tested forward/reverse pressure. Pressure reading 0 on both forward and reverse. Removed modulating valve and checked if there was any damage. No damage present, installed part. Spoke with Austin and updated.		
02/16/2026		Arrived at customer location and located unit. Austin was not on location. Prepped for work. Installed gauge and tested forward regulated clutch pressure. Pressure showed roughly 153 psi. Double checked solenoid response when unplugged and input response on spicer box. No issues with either. Made testing harness for solenoid. Got drive tires of unit off ground and supplied direct 12vdc to solenoid. Tires spin and tested inching pedal during operation. Both worked with no issues. Swapped TCU from sister unit customer has. Tested unit. Unit moves forward and reverse in all gears with no issues. Acceleration pedal gets stuck engaged. Removed and found seizing. Attempted to remove pin and plastic housing broke. Contacted Austin and updated. Got with parts department for pricing and availability.		
03/10/2026		Picked up parts. Arrived at customer location and located unit. Prepped for repair. Installed new TCM and foot pedal base. Installed panels and flooring. Operated unit around customer shop, verified working properly with no issues at this time. Parked unit and released back to customer.
