			Operations		
			Remove necessary components to remove engine from		
			truck: drive shaft, drain trans oil, trans cooler lines from		
			trans, fuel tank cross members, shift tower, trans electrical		
			harness, clutch slave cylinder, remove transmission,		
			steer axle tires, both front fenders, air cleaner housing		
			and tubing, clutch oil reservoir, windshield wipers and cowl,		
			windshield wiper motor, cab interior and dog house, both		
			cac tubes, air conditioning compressor and condenser,		
			cooling package and associated oil and coolant hoses,		
			oil tubes for centrifugal oil filter, disconnect batteries,		
			remove starter and alternator cables, remove OEM		
			wiring harness, all air lines from air compressor, engine		
			air supply line, remove power steering hoses.		
			Remove engine from truck and swap necessary		
			components from old engine to new engine: ECM,		
			air compressor/power steering pump with power steering		
			oil tubes, starter, alternator, upper and lower radiator hoses,		
			fan shroud bracket, EGR coolant hoses, oil dipstick tube		
			and connector fitting. Reinstall engine back into truck with		
			new clutch and throw out bearing grease line. Reinstall		
			all components that were removed to remove and replace		
			engine. Fill all fluids, run truck and verify no leaks and		
			no check engine light. Pressure wash truck and take on		
			test drive. After test drive verify no check engine lights		
			or fluid leaks. Fan update kit also installed and ECM/BCM		
			were programmed by Rush.
