PRODUCT/SERVICE	DESCRIPTION	TAX	QTY/HRS	RATE	AMOUNT
Labor sales	Complaint: Diag truck as it gets throw into limp mode, customer says it happens a lot quicker when towing but even just driving down the highway after some time it'll quit off cruise and get thrown into a limp mode; Cause: Customer request; Correction: Test drove truck multiple times for it to go into limp mode and when it finally did it threw a low fuel pressure code so I flashed a stock file into the truck and checked if there was a update for the pcm but there was no update so I rermoved the fuel tank and found a lot of metal shavings in the fuel which tells me that the injection pump is bad, so the pump and injectors need to be replaced and all the lines cleaned. I also checked why the fuel sending unit isnt working and found that the fuel sending unit is bad, I thought i had fixed it since it worked when it was off but now with it in the tank it does not work so the fuel sending unit will have to be replaced.
