Condition Fix ac

Correction Pulled truck into shop and inspected AC system. Found that the compressor would not turn on and did not have power going to it. Diagnosed no power to the compressor and found that the incorrect fuse was installed in the fuse panel for the AC compressor causing a bad connection. Checked AC performance and found that the system was over charged and the evaporator was severely plugged. Recovered the system and removed the evaporator. The low side line was seized to the evaporator so the evaporator and line were ruined upon removal. Cleaned out HVAC box and installed a new evaporator with new orifice tube with all new o-rings. Installed low side line with new o-rings and replaced accumulator. Installed a new cab air filter. Vacuumed the system and tested for leaks. Charged the system to spec. Ran the AC to confirm good performance.
