Recall #: W58 | 2014-2018 WK & DS LOSS OF CRANKSHAFT POSITION Recall Date: 2020 Aug 20

Recall Description

The magnetic material attached to the tone wheel provides a signal to the crankshaft position sensor. If this signal material is lost, the engine loses its ability to synchronize injector pulses and cam timing. This loss of crankshaft position can result in an engine stall, as well as loss of the ability to restart the engine.

Remedy

Update the powertrain control module software to maintain vehicle propulsion by reading the camshaft position signal in the event that crankshaft position signal is lost.
