EQUIPMENT CERTIFICATION

Equipment:	Truck Mounted Articulating Boom Crane
Manufacturer:	Fassi
Model:	F50A.24
Serial Number:	5214
Unit Number:	12-05

The above crane unit was examined in detail on September 5, 2025 at Skocdopole's yard near Eckville. The unit was in an assembled and degreased condition. Magnetic particle and/or visual inspections were completed on all accessible areas of the load hook, swivel, (4) hydraulic boom sections, (2) articulating boom sections, turret, pedestal, sub-frame, tie-downs, outriggers, boom rest, lift, tilt, and extension cylinder ends and lugs.

Based on the inspections, it is our opinion that the unit is safe to operate within its rated capacity when used in accordance with the manufacturers' specifications and/or industry standards.

We recommend having all tie-down bolts re-torqued to manufacturers' specifications annually.

This certification is valid for a period of 1 year or until the unit has been damaged structurally by either handling or operation. Unengineered structural modifications to this unit will void this certification.
