SIGNATURE	
ON THIS DATE TANK RENDERED SAFE BY	09/16/2026

IT IS IMPORTANT TO RECOGNIZE THAT:

- In order to do so, it may have been necessary to steam or otherwise introduce water into the tank, its pipelines and other accessories.
- As part of the process, pipelines may be left unconnected. Manholes and other devices may also be open and these must be identified and dealt with. This is your responsibility.
- Prior to being placed back in service all piping connections, valves etc. should be checked and the system should be purged to remove moisture or other contaminants introduced during the steaming or repair operations.
- There is a danger of damage to the tank or its equipment through freezing. It is your responsibility to avoid such damage. Jasper Tank specifically disclaims any liability for damage of this sort.
- **(FOR FUEL TANKS) Methanol has been added to the pump and sump(s) to prevent freeze up. It is the responsibility of the Owner to purge the methanol from the system if necessary and dispose of correctly.**

While this tank has been rendered safe as of this date, Jasper Tank instructs that it be re-tested for dangerous fumes and vapors at frequent intervals by the Owner or Operator. Although steamed and rendered safe, fumes and vapors may develop and exceed safe levels at any time. Jasper Tank assumes no responsibility for the tank and its fume and vapor levels after the Owner or Operator has taken position of the unit.
