21/08/2025	843,871 kms 71,052 hrs	<b>After-treatment issue R-18663</b>	K&C autos
		Complaint: After-treatment issue Cause: Seized dosing injector and outdated ECM calibration Correction: 21/8/25 - Assessed the vehicle. - Scanned fault codes and found active after-treatment codes. - Followed troubleshooting procedures and completed a click test. - Determined the truck needs to come to the workshop for further tests. - Vehicle arrived at K & C Workshop. - Connected diagnostic tool and found active fault codes related to the 'NOx inlet sensor, data valid but above normal operating range'. - Inspected the exhaust system and SCR, found no signs of the inlet NOx sensor. - Attempted to find troubleshooting information through Cummins Insight, but nothing was available. - Used Cummins QuickServe Online to access ECM information. - The ECM did not list this fault code. - Reviewed wiring diagrams, but nothing listed the inlet NOx sensor. - Found troubleshooting steps and followed them. - This involved removing the AdBlue dosing injector to confirm correct dosing. - Due to the dosing injector being seized in the exhaust, I had to remove that section of the exhaust. - While removing the exhaust, the V-bands were also seized and broke apart, requiring replacement. - Removed the seized injector and performed a dosing override test, which tested good. - Re-fitted the exhaust and secured the wiring. - Consulted with Cummins for support, and they informed me that a calibration and update were required. - Cummins had to come to the site to perform this. - All tests were successful.	
18/08/2025		<b>trailer tyre R-18553</b>	Metro tyres
17/08/2025		<b>Registration O-3799</b>
