Complaint: Load Bank

Cause: Inspection and load bank

Labor	Correction: AC Generator / AC Generator / Move units around so the NG line will reach all units. Check oil, coolant, and air filter. Remove front panels. Connect load bank cables to main breaker box. Swap fitting on regulator and connect NG supply line. Install ball valve inside enclosure for NG bleed. Start unit and let it run through warm up cycle. Confirm oil pressure and battery charging. Once up to temp, put under load, work up to 80% for an hour. Anything over 80% load would cause it to go down on under frequency. Also seems to be a supply fuel problem as it is the same across all units. Take off load and let unit cool down, then shut down. Bleed off NG and remove supply line and fitting. Disconnect load bank cables and put panel back together.	3.00000	\$170.00	\$510.00
-------	---	---------	----------	----------

Defects:
E-stop missing red button, but does work
Containment needs to be drained
Unused wiring in front panel should be removed
Cold start aids recommended for winter - Completed: 11/6/2024

Subtotal \$510.00
