Exhibit 1. Date November 3, 2021. Rev 0
Inspection and Test Report in accordance with CSA B620 7.2. Page 2 of 6.

Ref	External Inspection. Appendix 1 - 1.0 and CSA B620 7.2.1	Pass	Fail	Corrected	NA
1	Metal identification plate, tank markings: Inspect to ensure plate is secured, entries legible - no paint or corrosion. Ensuring that specification markings and all other required markings on the tank are present and legible.	☒	☐	☐	☐
2	Without removing insulation or jacketing, inspect tank for corroded areas, dents, distortions, defects in welds, and any other condition, including leakage, that indicates weakness in the tank that might render it unsafe for transportation. Corroded or abraded areas shall be thickness tested and documented. Overlay patches are prohibited. Insulated tanks – Outer Jacket. Condition of attachments, dents, digs, scrapes, perforations, loose sheeting, cracks and distortion.	☐	☒	☒	☐
3	Inspect structural supports, crossmembers, outriggers, pads, tank frame, reinforcement rings, major appurtenances and attachments, connecting structures, and those elements of the upper coupler (fifth wheel) assembly that can be inspected without dismantling that assembly, are not damaged or corroded so as to affect safe operation of the vehicle	☐	☒	☒	☐
4	Inspect piping, valves and gaskets for operation, leakage, corrosion. Ensure proper functioning of all valves, vents, pressure and emergency devices, including self-closing stop valves, excess-flow valves, and remote closure devices – ensuring that they are free of corrosion, distortion or any other condition or damage that would prevent their normal operation. Ensure all bottom outlet valves have shear sections or accident damage protection. Ensure that fusible links, and fusible elements are present and operative	☐	☒	☒	☐
5	Inspect all ladders, catwalks, platforms and fall protection devices for damage, defects in welds, ensuring their safe operation.	☒	☐	☐	☐
6	Inspect manway covers, all closure devices, caps, nipples and plugs for leaks, tightness and operation. Check all gaskets for leaks. Inspect all bolts and nuts on any flanged connections or blank flange – ensure all bolts, nuts are in place and properly secured	☐	☒	☒	☐
7	All vacuum and reclosing pressure-relief devices shall be externally inspected for any corrosion or damage that could prevent their safe operation.	☒	☐	☐	☐
8	For tanks in corrosive service, all vacuum and reclosing pressure-relief devices shall be removed for inspection and shall be bench tested to ensure that they open at the required set-to-discharge pressure for the tank's MAWP and reseal at not less than 90% of that pressure or at the reseal pressure prescribed for the tank specification	☐	☐	☐	☒
9	Inspect accident damage protection devices – condition of welds, damage, distortion, corrosion abrasion and any other condition that might render the tank unsafe for transportation or cause the tank to be out of compliance.	☒	☐	☐	☐
10	TC/MC 331-Inspect the internal self-closing valve in the liquid discharge opening for leakage through the valve. Off-truck emergency shutdown system shall be inspected to ensure that the system will stop the flow of product from the tank or shall stop motive power to the tank transfer pump.	☐	☐	☐	☒
11	Full opening rear heads – the gaskets shall be inspected for cuts cracks or splits and replaced if cuts cracks, or splits exceed 0.5".	☐	☐	☐	☒
12	Inspect hose assemblies mounted on or accompanying the tank to ensure that they do not display any defects. Inspect hose assemblies to ensure that the required markings are legible, and that the markings indicate that the hose assemblies are pressure tested within the prescribed period. Complete Hose Assembly Inspection and Test Report Exhibit 2	☐	☐	☐	☒
13	Tank marking: Date (month and year), Symbol (V), Facility Registration Number applied after all defects corrected, inspected, and tested	☒	☐	☐	☐

No Defects Found ☒ Defects Found ☒ Defects Corrected, Inspected and Tested - Pass ☒.
