remarks BR 350 908900029

Machine driving in circles, found that the machine had a pump at 5800 PSI at idle after checking pressures  
Removed, cleaned and reinstalled the RH EDC and centered the controller to equalize pressures at idle  
Tested all pump pressures LH high 7013 PSI charge 350 PSI RH high 7090 PSI charge 350 PSI  
Carried out full inspection of machine and found it needs 3 flexitors, joystick arm rest, 6 LH inner bars, and 5 RH inner bars  
Welded up all cracked bars and backing plates  
Made brace for the armrest  
Checked heater blower not working, needs heater valve  
Welded on the hydraulic tank mounts and fit the new rubber mounts  
Changed a middle idler wheel  
Fit ice picks  
Fit all side panels  
Changed the final drive oils  
Carry out drive teach in and made adjustments to make sure machine drove straight  
Highly recommend repacking all suspension bearings next summer  
Greased full machine
