Work Description:

Fire up 336 hoe and bring out new tracks. Align new tracks up behind old tracks. Unbolt tracks and lay out. Finish torquing the last of the rollers and lift up unit off of stands. Grind welds off of stands and remove. Using the skid steer I pushed back the D8T onto the new set of tracks. Order a tap. Clean out all of the scrap rollers and hardware from under D8T. Take a peek looking for the coolant leak.
