Line Task

1 ✓ Diag and repair misfire

Notes

eng had miss when it was pulled in so i removed air box and muffler to get access to valve cover, remove valve cover and found #1 exhaust push tube had fallen out of spot, removed and inspected and found no damage so i put it back together and tested and found it still had a miss, pulled it back apart again and tried to find something i missed but i couldn't find anything, fired machine back up with cover off to diag miss and while doing that it went away and didn't return, possible aerated injector is the best answer i can come up with, put machine back together and pulled out of shop
