	<p>_____ Authorized by</p>				

The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atomic nucleus. It is shown that the nucleus is a system of protons and neutrons, which are bound together by the strong interaction. The binding energy of the nucleus is determined by the number of protons and neutrons, and is given by the semi-empirical mass formula.

The second part of the paper is devoted to a discussion of the properties of the atomic nucleus. It is shown that the nucleus has a definite size and shape, and that the distribution of protons and neutrons is not uniform. The radius of the nucleus is given by the formula $R = r_0 A^{1/3}$, where r_0 is the nuclear radius constant and A is the mass number.

The third part of the paper is devoted to a discussion of the decay of the atomic nucleus. It is shown that the nucleus can decay by emitting alpha particles, beta particles, or gamma rays. The decay constant of the nucleus is given by the formula $\lambda = \ln 2 / T_{1/2}$, where $T_{1/2}$ is the half-life of the nucleus.

The fourth part of the paper is devoted to a discussion of the interaction of the atomic nucleus with other particles. It is shown that the nucleus can interact with other particles by the strong interaction, the electromagnetic interaction, or the weak interaction. The cross-section of the nucleus for a given interaction is given by the formula $\sigma = \pi R^2$, where R is the radius of the nucleus.

The fifth part of the paper is devoted to a discussion of the applications of the atomic nucleus. It is shown that the atomic nucleus can be used as a source of energy, as a source of radiation, or as a target for nuclear reactions. The atomic nucleus is also used in the study of the structure of matter.

The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atomic nucleus. It is shown that the nucleus is a system of protons and neutrons, which are bound together by the strong interaction. The binding energy of the nucleus is determined by the number of protons and neutrons, and is given by the semi-empirical mass formula.

The second part of the paper is devoted to a discussion of the properties of the atomic nucleus. It is shown that the nucleus has a definite size and shape, and that the distribution of protons and neutrons is not uniform. The radius of the nucleus is given by the formula $R = r_0 A^{1/3}$, where r_0 is the nuclear radius constant and A is the mass number.

The third part of the paper is devoted to a discussion of the decay of the atomic nucleus. It is shown that the nucleus can decay by emitting alpha particles, beta particles, or gamma rays. The decay constant of the nucleus is given by the formula $\lambda = \ln 2 / T_{1/2}$, where $T_{1/2}$ is the half-life of the nucleus.

The fourth part of the paper is devoted to a discussion of the interaction of the atomic nucleus with other particles. It is shown that the nucleus can interact with other particles by the strong interaction, the electromagnetic interaction, or the weak interaction. The cross-section of the nucleus for a given interaction is given by the formula $\sigma = \pi R^2$, where R is the radius of the nucleus.

The fifth part of the paper is devoted to a discussion of the applications of the atomic nucleus. It is shown that the atomic nucleus can be used as a source of energy, as a source of radiation, or as a target for nuclear reactions. The atomic nucleus is also used in the study of the structure of matter.

The sixth part of the paper is devoted to a discussion of the future of the atomic nucleus. It is shown that the atomic nucleus is a very interesting and important subject, and that it is worth studying in more detail.
