Maintenance Description:	inspect all brakes and found the right hand brake shoe on axle 3 heavily worn, with the brake shoe spring jammed in the backing plate jacked up the vehicle and removed the wheels and brake drum then took out the worn brake shoe. sourced and assembled new brake shoe shoes installed them along with the drum and wheels nuts, adjusted brakes and confirmed all was fine. removed radiator stay mounting brackets from cab cross tube, unbolted and removed the snapped cross tube, then positioned the new one. dowel holes didnt align so a forklift was used under the cab mount, cab mount bolts were loosened, the cab raised slightly to align the dowel , and mounting bolts installed and tightened Submitted By Scott Girard - 22/01/2026 01:34 pm
