REPACK TRAILER BEARINGS			
	Released the park brakes with workshop air pressure and lifted up each axle to turn the wheels to a position that we can crack the hub caps with, unplugged the park brakes then lowered each axle. Released Park brake and backed off brakes, jacked each axle up and lowered onto stands, opened up both rear of trailer curtains and slid two gates on either side up to give more room to work. Removed 6x hubcaps, took all locking springs out of axles, unscrewed all hub nuts and removed all hubs as one set. Removed all outer circlips, hub nuts, outer wheel bearings, removed seal runners and O rings, removed dust seals, removed inner circlip and removed hub seals and removed inner wheel bearings and tagged inner and outer bearings so they go back onto the same hub. Cleaned all bearings in the hot wash, cleaned all hub seals and circlips and hub nuts, cleaned stub axles and hubs, pulled bearings out of the hot wash after 1 hour, brake cleaned them and blew them out with air, inspected all bearings, stub axles, hubs and tested the tension for the hub nuts 4/6 failed and need replacing, inspected seals. Repacked all hubs & fitted bearings & seals to the hubs. Fitted hubs to axles and tensioned wheels nuts. Adjusted all brakes. Lowered trailer on to ground.
