**VDAS Loss Of Pressure (LOP) Fire Suppression System  
12-monthly Service Sheet**

<b>CUSTOMER:</b>	
<b>DATE:</b> 9-2-23	<b>Purchase Order No:</b>
<b>MACHINE No:</b> MC1281	<b>Work Order No:</b>

**Is the Equipment Serviceable?**  YES (continue below)  
 NO (list required repairs at the bottom)

1. Check cylinder date to make sure a 5 yearly is not required.	<input checked="" type="checkbox"/>
2. Record cylinder manufacturing date (or last pressure test date) to identify if hydrostatic testing is required. Ensure the cylinder is not damaged / dented. Date: 2023 (MM/YY)	<input checked="" type="checkbox"/>
3. Perform a discharge test by activating the system via a remote actuation point. Please follow local/state government and site specific requirements and procedures - Refer to the foam change out procedure if required.	<input checked="" type="checkbox"/>
4. Record discharge time and observe nozzle area coverage. 110 secs.	<input checked="" type="checkbox"/>
5. Ensure that all dust caps blow off all nozzles. Engine shutdown delay test completed _____ secs Record shutdown delay: _____ secs (Cross if N/A <input type="checkbox"/> )	<input type="checkbox"/>
6. Inspect the spray pattern to ensure it has appropriate coverage in the hazard areas identified (based on nozzle placement and general risk area locations - Video recording is recommended to identify and verify nozzle spray pattern and discharge time).	<input checked="" type="checkbox"/>
7. After discharge test has been performed ensure that the system is fully degassed (refer to Section 8.2 of the service manual).	<input checked="" type="checkbox"/>
8. Flush fresh water through the nozzles to remove all traces of foam agent. Once the the discharge lines are free of foam agent use extreme care to ensure the lines are free of moisture using air/nitrogen. Clean the machine free of foam.	<input checked="" type="checkbox"/>
9. Lubricate silicon nozzle dust caps (replace if damaged) or nozzle O-rings (for brass caps) with Molykote 111 O-ring grease and re-fit dust caps onto the nozzles.	<input checked="" type="checkbox"/>
10. Inspect detection tube and replace as required or at the 24 month period, whichever comes first.	<input checked="" type="checkbox"/>
11. Remove, service and reinstall remote actuator/s as per the LOP Service and Maintenance Manual.	<input checked="" type="checkbox"/>
12. Remove, service and reinstall the main cylinder valve(s) as per the LOP Service and Maintenance Manual.	<input checked="" type="checkbox"/>
13. Seat piston manually prior to reinstalling LOP valve, to make sure it is seated fully.	<input checked="" type="checkbox"/>
14. Inspect siphon tube(s). Replace if collapsed, bulges, kinked, incorrect length, has holes, or is loose on the hose barb.	<input checked="" type="checkbox"/>
15. Fill and charge the system to manufacturers specifications. If previously installed with a non-Fluorine free agent remove old label and replace with correct fluorine free label as per cylinder size and manufacturer of agent.	<input checked="" type="checkbox"/>
(For fill details on QTEC Systems, refer to Section 15. of the LOP Service and Maintenance Manual" or check cylinder label. See Table 1. Below for pressure table)

16.	Check that the relief valve fitted to the cylinder fill plug moves freely.	<input checked="" type="checkbox"/>
17.	Carry out a leak test using the pressure gauges as a visual and utilise a leak detector spray on all possible leak points in the system.	<input checked="" type="checkbox"/>
18.	<p>(For details, refer to Section 19.1. of the 'LOP Service and Maintenance Manual')</p> <p>Recorded pressure on all remote actuator(s) and cylinder(s):</p> <p>Location#1: <u>Cylinder</u> Pressure: <u>1350</u> kPa            Location#2: <u>RA Stairs</u> Pressure: <u>1350</u> kPa            Location#3: <u>RA Cab</u> Pressure: <u>1350</u> kPa</p> <p>(If more than 3 Cylinders and actuators, complete the remaining info on the Remarks section)</p>	<input checked="" type="checkbox"/>
19.	Fit anti-tamper ties to remote actuator/s.	<input checked="" type="checkbox"/>
20.	Install AS 5062 service tag if missing. Stamp service tag #2 (Yearly) at the current date	<input checked="" type="checkbox"/>
21.	On completion of the service the LOCKOUT officer / staff member needs to conduct a final walk around to check all connections, hoses and service points for a final inspection before reinstating of the system serviceability.	<input checked="" type="checkbox"/>
22.	Update service record on the Fire Suppression Database.	<input type="checkbox"/>

<b>Labour time:</b>	Start (time)	0630	
	Finish (time)	1100	
	Total	4.5	Hours

**Further repairs required:**

- Detection tube due @ next 12 monthly
- Engine shutdown failed, needs rectifying
