NOTES:

0195: C- COOLANT IN OIL
 C- CYLINDER LINER P#504305869
 C- Brought unit into shop. Checked engine oil level. Oil level was high and very milky. Drained engine oil and removed oil pan. Coolant tank was empty. Added water to tank and pressure tested cooling system. Before pressuring up system water was leaking out of main bearings on crank shaft. After pressuring up system water was pouring out the first main bearing. Drained remaining water in system. Disconnected the batteries. Removed exhaust system and intake system. Removed both engine side panels and hood. Removed sub frame over engine. Removed a/c compressor and fan belts. Removed fan and shroud. Removed electrical plugs and engine wire harness from engine. Removed bolts from gear increaser into engine. Used overhead crane to lift up on engine. Removed engine mounting bolts. Moved engine forward and free from gear increaser shaft. Lifted engine out and set on stands. Removed valve cover and crank case breather cover. Removed fuel lines and common rail from head. Removed wiring from head to block. Removed rocker shaft and rockers. Removed head bolts and lifted head from engine block. Cleaned head and inspected. Inspected head gasket. Filled block with water to test where water was leaking from. Plugged holes in the engine block and pressurized engine block. Liners were bubbling with air around the top of the block. Water was also leaking out around mains. Removed all the pistons to inspect bearings. Bearings were worn out. Removed liner #1 to inspect o-rings. Top o-ring on liner was rotten and no good. Re-assembled engine to be shipped out for a core. Removed

Tax	D	Qty	Description	Price	Amount
			parts from old engine onto the new re-man engine. Used over head crane to lift engine back into the sprayer. Installed rear engine mounts and bell housing bolts. Installed front engine mounts and water lines to the rad. Installed wirring harness onto engine. Installed fan shroud and fan onto engine. Installed hydraulic line running to the engine fan. Installed air to air lines and air cleaner. Installed exhaust and piping from turbo to the muffler. Changed fuel filters. Filled unit with fresh engine oil and coolant. Topped up hydraulic oil and installed battery charger onto unit. Bled all the air out of the fuel system. Started unit and checked for any leaks. Fan belt was not centered on the fan pulley. Installed new tensioner and ran unit. Washed off around the engine and hydraulic pumps. Installed side pannels and hood onto unit. Fixed small coolant leak under rad. Test drove and let run at high idle while checking for leaks.
