**SEGMENT 1: PAD SWAP**

**COMPLETED PAD SWAP**

2025/08/06  
Chisseled rail which was packed with mud. Disassembled track which became tricky because several bolts were stripped (116 in all, a pair was displayed in the pictures). Extra time was needed to ensure the socket could grab the heads.

2025/08/07  
Torched bolts out, lifted and flipped pads, pulled rail off, folded and scrapped, pulled new rail on, varnished and buffed, flipped pads back over, sorted out bolts, molykoted and impacted bolts, torqued bolts to 290 foot-pounds with 120 degrees of rotation, pulled track off and folded it up, pulled next track on, took out bolts, torched 15 bolts out, lifted and flipped pads, pulled rail off, folded and scrapped, pulled new rail on, varnished and buffed.

2025/08/08  
Flipped pads, molykoted and impacted bolts, torqued bolts to 290 foot-pounds with 120 degrees of rotation, pulled track off and folded it up, labeled all parts and put them with tracks, cabled all tracks.

**SEGMENT 8: REPLACE HVAC UNIT**

2025/04/07  
 REMOVE SEAT, HVAC COVERS IN CAB AND RECOVERED A/C REMOVED PANEL UNDER CAB TO ACCESS THE UNIT

2025/04/12  
 disconnected all hoses and mounts for air box. marked and disconnected all harness'. removed air box. swapped over parts and cleaned cab of debris and dirt. inspected heater hoses and found that they are heat baked and cracked due to difficulty removing off heater box. requested quote for hose replace or the fix for cheaper repair option.

2025/04/25  
 hook up air box with lg6 on connections and new orings on refrigerant lines.  
 mounted hvac box and hooked up electrical connections and ducting lines.  
 -with key on power, tested all actuators.  
 -vacuum filled coolant, charged and leak tested air conditioning system. charged with 2.2 lbs and passed.

2025/04/26  
 reassembled cab, installed all panelling and installed seal in cab.  
 -topped up hydraulic oil.  
 installed all lower under guards.  
 ran machine and tested operation of hvac unit. all ducting functions and machine blows cold air. checked for codes, none present now. checked for machine leaks.

 (EXCLUDING ENV. LEVY)      ENV. LEVY 0.00

**SEGMENT 18: R&I CONTROL VALVE + RESEAL**

2025/04/05  
 -colour coded hoses for removal

2025/04/05  
 -coloured hoses  
 -drained hydraulic system  
 -removed pilot lines (had issues with two of the "quick connects")  
 -removed all hoses and pipes off the front of the control valve  
 -removed drain

2025/04/06  
 -finished disconnecting control valve  
 -had to removed hard pipes in front to get enough clearance to bring the valve forward and out  
 -bagged all lines  
 -moved valve to wash bay and cleaned  
 -set up area for resealing, printed off all parts pictures for reference  
 -started resealing fittings, spool caps and compensators

2025/04/07  
 -resealed all fittings, plugs, spool caps  
 -resealed merge-divider and re mounted, torqued to spec (130ft/lbs)  
 -split control valve stack, resealed and torqued to spec (130ft/lbs)

2025/04/08  
 -flipped control valve and split bottom section  
 -resealed lower and torqued to spec (130ft/lbs)  
 -resealed all compensators (still original compensators, recommended swaping for new as over 8000 hours)  
 -replaced all orfs on fittings and flange orings on hardpipes and hoses  
 -lowered valve into machine and mounted

2025/04/09  
 -installed all hoses (fitment issues with boom hardlines and 2 quick connects)  
 -installed panels

2025/05/03  
 Ran the unit and the units functions were not correct. Functions were mixed up. Had to figure out if it was the pilot lines from the joy stick or the valve. Figured out it was the valve, Switched the fittings from the bucket valve to the boom valve and tested function, working as it should. Went and moved the unit and the quick connect lines blow off the valve and sprayed oil everywhere. Connected them properly and pressure washed the area. Took the unit outside and performed a PM clinic on the unit and found that the Travel speed on the LH track is poor. Pressures are set at 390MPA for ravel on both directions. LS pressure will not increase on the LH side no matter what. Could be due to bad compensator's.

**SEGMENT 30: ADVISE ON FLOATING SEAL**

20HRS X \$175.00 = \$3,500.00

Oil leak from final drive

Floating seal failure

Confirm floating seal leak.  
 Check fluid level in final drive (low).  
 Confirm not overfilled due to travel motor shaft seal failure.

Relieve track tension.  
 Press track apart.  
 Remove final drive. Lock nut 6 turns to remove.  
 Remove damaged floating seals.  
 Clean mounting surfaces.  
 Install floating seals.  
 Clean final drive components.  
 Install hub, tighten lock nut 6 turns, install lock plate.  
 Install seal for ring gear, LG6 seal.  
 Install planetaries.  
 Install final drive cover, fill with TO30.  
 Install track. Confirm operation, no leaks.

Replace LH travel compensators.  
 Adjust LS valves.
