Cause No fault lamps are on currently when driving vehicle into the shop. Checked for codes and found multiple codes in multiple modules. Printed off screen shot of all the codes found.

Followd pinpoint test LA for code C0051:54-steering wheel position sensor missing calibration. LA1-no. LA2- yes. LA3-yes, there is no damage but there is some play in the passenger side outer tie rod. LA4- no. LA5- completed IVD initialization. Selftested ABS module. No codes returned.

Followed pinpoint test X for code U2101:00-SCCM- control module configuration incompatible. X1- no, there was no recent work done to the SCCM. X4-inspect inside all SCCM connectors for pin issues and/or corrosion. Everything looks ok. Advises code may have set due to a connection issue in one of the connectors.

For code U2100:00-BCM-B- initial configuration not complete I performed a PMI of the BCM-B module as per the workshop manual. Checked for code. Code cleared.

Will roadtest to see if any codes return. No codes returned and no warning messages came up on my roadtest.

Old bulb does look like it was burnt out though. Checked the wiring diagram and found that the lower bulbs are powered by a separate aux light module. Checked the power supply fuse 56 in the BJB and found it isnt there. Got a new fuse and installed. All headlamp lights are all working now. For the drive rear marker lamp on the flatdeck it look like the pigtail is fine. Cleaned off dirt and tested with a marker light from the other side. Lights up the marker light. Just need a new light and rubber grommet. Installed a new grommet and light. Verified operation. All ok.	Request Sub-total	275.60
