Scanned for codes, monitored scan data and cleared codes as required. Found a code P0678 glow plug 8 control circuit, replaced glow plug 8. Cleared codes and started truck, no codes returned. Noticed there is a noisy pulley. Removed serpentine belt, spun pulleys by hand and found the alternator, tensioner pulley and both idler pulleys are noisy. Replaced alternator, tensioner pulley and both idler pulleys. Installed new serpentine belt, started truck and found the pulley noise is now gone. Noticed right front CV shaft outer boot is torn wide open and lost lots of grease. Replaced right front CV shaft, while replacing we noticed both inner tie rod end boots are popped off the tie rod ends. Right front hub cap is missing. Right front wheel has been torqued to spec (140ft/lbs) and will require a retorquing within 100kms.

Have your wheels retorqued, everytime your wheels come off you need to come back and have them retorqued within 100 kms, we provide this as a free service to you. This is your responsibility, should you get your wheels retorqued somewhere else, Affordable Mechanical Services Ltd is not responsible for any consequences.

Thank you, we appreciate your business and look forward to serving you in the future.
