Recall #: N242454440 | Momentary Rear Wheel Lock-Up Recall Date: 2024 Oct 28

Recall Description

General Motors has decided that a defect which relates to motor vehicle safety may exist in certain: 2020 – 2022 model year Chevrolet Silverado1500/2500/3500 and GMC Sierra 1500/2500/3500, and 2021 – 2022 model year Cadillac Escalade and Escalade ESV, Chevrolet Suburban and Tahoe, and GMC Yukon and Yukon XL vehicles equipped with diesel engines. A transmission control valve in some of these vehicles may be susceptible to excess wear over time, resulting in a gradual loss of pressure within the valve that can cause harsh shifting. In rare cases, the rear wheels may experience a momentary lock up. If the rear wheels lock-up momentarily while driving, there is increased risk of a crash.

Remedy

Dealers will install new transmission control module software that will monitor valve performance and detect excess wear approximately 10,000 miles before a wheel lock up condition could occur. Once detected, the transmission will be limited to fifth gear, preventing the possibility of a wheel lock up condition, which occurs in a downshift from eighth gear. A service engine light and reduced propulsion message will also display in the instrument panel.

This recall was open as of the date/time that this report was generated. For more information, or to find out if the recall has been closed, please contact GMC or visit [GM's website](https://my.gm.ca/gm/en/recalls). (https://my.gm.ca/gm/en/recalls)
